

# Revealing the truth: Ants just love Pure Raw Honey because it is nutritious

A question that has been debated recently – are ants attracted by pure raw honey?

With just a click, vast amount of information can be found on the internet. Hence, it is inevitable that information about the characteristics of a pure raw honey can be such a controversial subject. The fact that genuine pure raw honey does not attract ants is solely a misconception because many thought that ants are only attracted to sugar and that is why they are attracted to fake honey that has sugar added to it.

Indeed, Ants feed on almost everything which they find nutritious! Anyone who spends time studying ants will know that ants are attracted to any food in its most natural state. When a small animal like a lizard dies, guess what happens to the body of the lizard, ants will surround it and carry it away. This natural circumstance would of course have nothing to do with the sweetness of the lizard as a dead lizard will definitely not be sweet nor have sugar added to it. Moreover, ants are also attracted to distilled water which goes to show that they know what is good for them. The fact can be proven in an area that has plenty of ants and where insecticides are not used. Surprisingly, ants will also gather around the porridge that is left unattended, that does not have sugar added into it.

With the aforementioned real life examples, it is no doubt that ants should be attracted to raw natural honey not only because it is sweet but also because these little creatures know that it is a great source of food for them.

Do you know that ants are so choosy? There is a certain brand of chocolate that taste sweet, but ants just stay away from it. The fact that ants avoid this brand of chocolate and other processed food is questionable because, if ants are attracted to sugar, surely they would be attracted to that brand of chocolate which had sugar in it. This clearly shows that there is something added to the chocolate that acts as an ant repellent. Just like unethical fish mongers who inject chemicals into fishes that cause flies to stay away from them. Likewise, if ants are not attracted to a certain brand of honey, then something must have been added to the honey to cause the ants to avoid it.

Generally, the idea of ants being attracted only to sugar is a myth. Ants are attracted to good nutritious food that is as close to nature as possible. NewLife™ Pure Raw Honey is a perfect natural super food that does not have any added sugar in it. It is compacted

with wide arrays of nutrients, vitamins, minerals and live enzymes which are the vital life forces and guess what; ants will definitely love it!
